1 Introduction

1.1. General Remarks

The content and presentation of this document has been carefully checked. No responsibility is accepted for any errors or omissions in the documentation.

Note that the documentation for the products is constantly revised and improved. The right to change this documentation at any time without notice is therefore reserved.

Syslogic is grateful for any help referring to errors or for suggestions for improvements.

The following registered trademarks are used:

IBM-PC, PC/AT, PS/2	trademarks of IBM Corporation
I^2C	trademark of Philips Corporation
CompactFlash	trademark of SanDisk Corporation
DiskOnChip	registered trademark of M-Systems LTD
PC/104	trademark of PC/104 Consortium
PCI/104	trademark of PC/104 Consortium
Geode	trademark of Advanced Micro Devices (AMD)
Windows CE	trademark of Microsoft Corporation
Windows XP Embedded	trademark of Microsoft Corporation

1.2. Contents of this Documentation

This document addresses to system integrators, programmers and instructed installation and maintenance personal working with the system. It provides all information needed to configure, setup and program the IPC/COMPACT6-1A system.

1.3. Naming Conventions

The exact product identification is IPC/COMPACT6-1A. Throughout this documentation the product is reference through it's marketing name "IPC/COMPACT6-SL".

The same applies to the integrated base board. The exact board identification is IPC/NETSBC-6A. Throughout this documentation it will be referenced as "NETSBC-6A".

1.4. Additional Products and Documents

1.4.1. Hardware Products

In order to mount the IPC/COMPACT7-SL correctly there are four different mounting kits which have to be ordered separately:

- IPC/MKITCP-1A: for rear mounting (DOC/IPC_MKITCP-1AE)
- IPC/MKITCP-2A: for bottom mounting (DOC/IPC_MKITCP-2AE)
- IPC/MKITCP-2C: for bottom mounting (DOC/IPC_MKITCP-2CE)
- IPC/MKITCP-2E: DIN rail kit (DOC/IPC_MKITCP-2EE)

For further assistance and information please contact the manufacturer.

1.4.2. Software Products

The following software products are useful together with the NETSBC-6A processor board:
- IPC/NETIPCFW-6A: Firmware for NETSBC-6A boards (contact manufacturer)
- IPC/IOCOMSW-1A: Sample program code and utilities for x86 based PC/104 systems
- Operating Systems: check chapter 6.4 for a list of supported implementations.

1.5. Documents and References

1.5.1. Syslogic Documentation

The following documents are *required* for correct installation and operation of the IPC/COMPACT6-SL:
- DOC/NETIPCFW6-E: User Documentation for NETIPC Firmware (contact manufacturer)
- DOC/IPC_IOCOMSW-E: User Documentation for programming examples and utilities

1.5.2. Standards and Books

The following documents are *useful* for additional information about PC/104 and IEEE 996.1:
- PC/104 Specification Version 2.3
- PCI/104 Specification Version 1.0
- IEEE 996: IEEE standard document 'Personal Computer Bus Standard'
- IEEE 996.1: IEEE standard document 'Compact Embedded-PC Modules'

The PC/104 Specification may be downloaded from the Internet (see address below).
- PC/104 Consortium
  www.pc104.org

The IEEE standard documents may be ordered directly from the IEEE or any standards document distributor (see addresses below).
- IEEE Standards Department
  www.ieee.org

- 'ISA & EISA, Theory and Operation' by Edward Solari (Annabooks, San Diego), ISBN 0-929392-15-9
- 'PCI System Architecture' by Tom Shanley / Don Anderson (Mindshare, Inc.), ISBN 0-201-30974-2

1.5.3. Datasheets
- Datasheet AMD Geode LX800 microprocessor
  http://www.amd.com/us-en/ConnectivitySolutions/ProductInformation/0,,50_2330_9863_13022%5E13073,00.html

1.6. Items delivered
- The IPC/COMPACT6-SL comes with an IPC/NETSBC-6A base board and an enclosure.

1.7. Installation
The firmware configuration and download is described in the appropriate firmware documentation.

Important Note

Before applying power to the IPC/COMPACT6-SL system, the NETSBC-6A board must be configured correctly and mounted.

1.8. Safety Recommendations and Warnings
The products are intended for measurement, control and communications applications in industrial environments. The products must be assembled and installed by specially trained people. The strict observation of the assembly and installation guidelines is mandatory.

The use of the products in systems in which life or health of persons is directly dependent (e.g. life support systems, patient monitoring systems, etc.) is not allowed.

The use of the products in potentially explosive atmospheres requires additional external protection circuitry which is not provided with the products.

In case of uncertainty or of believed errors in the documentation please immediately contact the manufacturer (address see chapter 10). Do not use or install the products if you are in doubt. In any case of misuse of the products, the user is solely liable for the consequences.

1.9. Electro-Static Discharge
Electronic boards are sensitive to Electro-Static Discharge (ESD). Please ensure that the product is handled with care and only in a ESD protected environment. Otherwise a proper operation is not garanteed and the warranty is not applicable.

1.10. Life Cycle Information

1.10.1. Transportation and Storage
During transportation and storage the products must be in their original packing. The original packing contains a box with antistatic and shock-absorbing material. It is recommended, to keep the original packing in case of return of the product to the factory for repair. Note that the packing is recyclable.

1.10.2. Operation

The operating environment must guarantee the environmental parameters (temperature, power supply, etc.) specified in the technical specification section of the product manuals.

The main functionality of the IPC system is defined by the application programs running on the processor board. The operating system and application programs are not part of the delivery by Syslogic but are defined, developed and tested by the customer or a system-integrator for each specific application. Refer to the respective documentation for more information.

1.10.3. Maintenance and Repair

The IPC system features error- and malfunction-detection circuitry. Diagnostic information gathered is transferred to the applications software where it can be used. In the rare case of a module hardware-failure or malfunction, the complete board should be exchanged. The faulty board must be returned to the factory for repair. Please use whenever possible the original packing for return of the product (ESD and mechanical protection).

1.10.4. Warranty

Our products are covered by a world-wide manufacturers warranty. The warranty period starts at the delivery time from our official distributor to the customer. The duration of the warranty period is specified in the respective product catalogs and the offers. All products carry a serial number for identification. The manufacturing data and deliveries are registered in a high level Quality Management System.

The warranty covers material and manufacturing defects. All products must be returned via the official distributor to the factory for repair or replacement. The warranty expires immediately if the products are damaged of operation outside of the specified recommended operating conditions. The warranty also expires if the date code or job number listed on the product is altered or rendered unintelligible. The warranty does not include damage due to errors in firmware or software delivered with the products.

1.10.5. RoHS

The products of the IPC/COMPACT6-SL family are designed and produced according to the Restriction of Hazardous Substances (RoHS) Directive (2002/95/EC).

1.10.6. Disposal and WEEE

At the end of the life span the IPC products must be properly disposed. IPC products contain a multitude of elements and must be disposed like computer parts. Some of the IPC products contain batteries which should be properly disposed.

The products of the IPC/COMPACT6-SL are not designed ready for operation for the end-user and intended for consumer applications. Therefore the Waste Electrical and Electronic Equipment (WEEE) Directive (2002/96/EC) is not applicable. But users should still dispose the product properly at the end of life.

2 Product Description

2.1. IPC/COMPACT-SL System

The IPC/COMPACT6-SL contains an enclosure and the IPC/NETSBC-6A motherboard. A list of main features of the motherboard can be found below:

2.2. Features of the IPC/NETSBC-6A

CPU Core
- AMD Geode LX800 @ 0.9W low power industrial processor board eliminating the need for enforced cooling
- high performance 32-bit 8-stage pipeline x86 based processor core with efficient prefetch and branch prediction
- integrated Floating Point Unit (supports MMX and AMD 3Dnow! instruction sets
- 500MHz processor clock
- Split I/D L1 cache_64kB Instruction cache, 64kB Data cache
- Configurable L2 cache (I or D or both)
- 64-bit wide DDR SDRAM interface

Memory
- 512 Mbyte DRAM on board (DDR400, 200MHz)

Graphics Controller
- high performance 2D 64-bit graphics controller with backwards compatibility to VGA and SVGA standards
- CRT controller supporting up to 1920x1440x32 bpp at 85Hz and 1600x1200x32 bpp at 100Hz

CompactFlash and IDE Interface
- Enhanced IDE interface (ATA-5 specification) supporting 2 IDE devices with PIO modes 0 to 4, MDMA modes 0 to 2 or UDMA modes 0 to 5
- standard 44 pin IDE (2mm) connector for two external IDE devices
- CompactFlash Type I connector for onboard mountable CompactFlash card configurable as master or slave IDE device (replacing one of the external IDE devices)

Integrated Peripherals
- integrated peripheral controller (IPC) with PC/AT compatible DMA controllers (2 x 8237), interrupt controllers (2 x 8259) and timer/counter channels (8254)
- hardware watchdog configurable for 100 ms or 1.6 s timeout, hardware reset activation
- temperature supervisor for software controlled power management

PS/2 Mouse and Keyboard Interface
- PC/AT compatible keyboard controller (8242 compatible) with PS/2 mouse support
- Only available on an internal header

Serial Ports
- Two serial RS232 ports (COM1, COM2) with 16 byte receive and transmit fifo (16550)

Universal Serial Bus
- Four USB V2.0 ports (OHCI/EHCI-Host Controller)

Ethernet
- Two 10/100baseT Ethernet interfaces

Firmware Flash Memory
- 16 MBit BootBlock Flash for BIOS, BIOS extensions and 1.44 Mbyte ROM-drive A: (floppy replacement), supporting easy firmware update through serial port

Add-On Memory
- 32 pin DIL socket for user installable Socket Memory supporting various types of 32 and 28 pin SRAM and EEPROM devices from 32 kbyte up to 512 kbyte
- battery backed through onboard battery or header

Real Time Clock
- Year 2000 compliant Real Time Clock (PC/AT compatible)
- battery backed through onboard battery or header

Configuration Switches
- Two rotary hex switches for customer application

Power Supply
- − Onboard non-isolated power supply with wide input range (10Vdc … 30Vdc)
- − Configurable power supply supervision (this function is only available on systems with revision 3 or higher)
- − Monitors either external power supply voltage or it can be used as external power fail or on/off input (this function is only available on systems with revision 3 or higher)
- − Optional isolated power supply

Fig. 1   Block Diagram (IPC/NETSBC-6A)

2.3.   Operating Modes

The IPC/COMPACT6-SL resp. NETSBC-6A is based on the standard PC/AT architecture and therefore operates in DOS-compatible mode (real mode) on start up. The configurable BIOS initializes all onboard peripherals to their default values, executes the BIOS extensions programmed into the onboard Boot Block Flash by the user and BIOS extensions found on installed expansion boards prior to booting the operating system from a user-selectable drive (boot sector or OS image file). The operating system (or eventually a BIOS extension) may switch to protected mode to execute high performance 32-bit program code.

2.4.   Startup Modes

The NETSBC-6A doesn't support any special startup modes.

3 Hardware Description

3.1. Overview

The NETSBC-6A board hardware may be configured by software (BIOS) and by jumper setting. Software configuration should always be done using the BIOS configuration program freely available as part of the NETSBC-6A firmware package IPC/NETIPCFW-6A, unless the BIOS does not support it (see firmware documentation DOC/NETIPCFW6 for details about supported BIOS configuration options).

The jumper and connector locations are shown in the board layout drawing (Fig. 3).

Important Note

Always check the jumper configuration of a freshly received board to comply with your system requirements before applying power, otherwise the system may get damaged or may fail to operate.

◆ syslogic
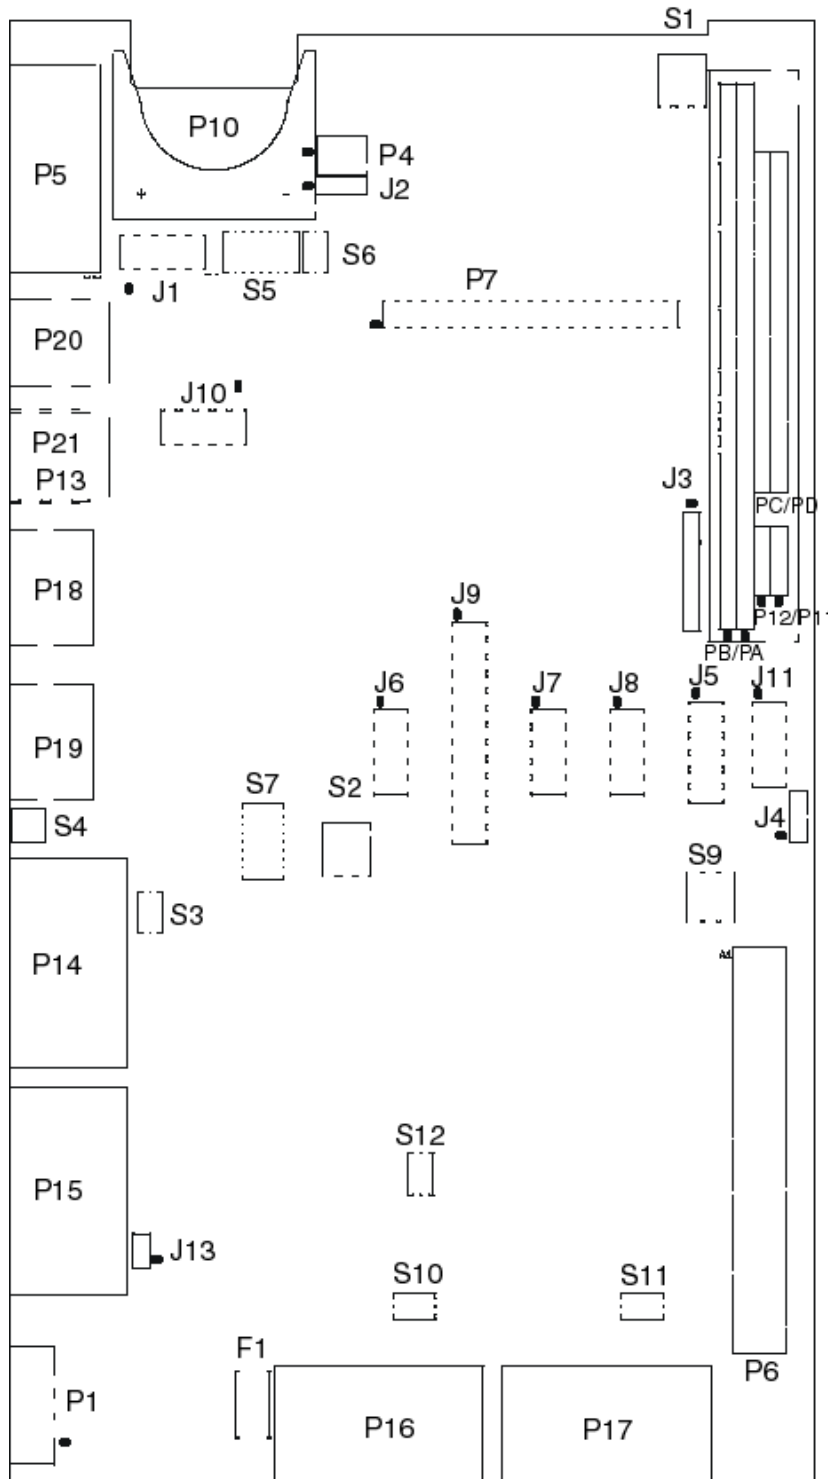

Fig. 2   Board Layout (NETSBC-6X)

3.2. Memory and I/O Resources

3.2.1. General Memory Layout and Configuration

The NETSBC-6A uses the same memory layout as a standard desktop PC. Four onboard devices , DRAM, graphics controller, Boot Block Flash and Socket Memory, make use of the 4 GByte adressable memory space.

Address	Device / Register	Remarks
0000'0000..0009'FFFFh	640 kByte Main Memory (DRAM)	
000A'0000..000B'FFFFh	Video Memory	
000C'0000..000D'BFFFh	Configurable memory range (BIOS, BIOS Extensions, DRAM, Socket Memory or redirected to PC/104 bus)	see paragraph 3.7.1 and 4.2.3
000D'C000..000F'FFFFh	BIOS	do not write
0010'0000…01EAF'FFFFh	491 Mbyte Main Memory (DRAM)	free Memory above 1M
01EB0'000..01FAF'FFFFh	16MB Graphic Memory	do not access
01FB0'0000..01FFF'FFFFh	4MB SMM, Firmbase, VSA	do not access
8088'0000..83EF'FFFFh	Reserved	do not access
FFE0'0000..FFF7'FFFFh	1.44 Mbyte Firmware Flash	ROM drive
FFF8'0000..FFFF'FFFFh	BIOS/BIOS Extensions	do not access

Tab. 1   Physical Memory Address Space Layout

Important Note

The main memory above 1M isn't fully usable for applications. The main memory for applications is shared with the graphics memory (UMA: Unified Memory Architecture). The graphics memory can be configured from 4MB to 60MB. The default value is 16MB.

Firmbase and System Management Mode software and drivers for Geode's VSA (Virtual System Architecture) are located at the top of the extended memory range (e.g. 4MB). The graphic memory Size can configured in the BIOS. To calculate the remaining memory space the graphic memory size and 4MB of the Firmbase/SMM/VSA must be subtracted from the memory top.

IPC/NETSBC-6A example: With the graphics memory size of 16 MByte (default), usable main memory ends at address:

- 01EAF'FFFFh (492 Mbyte free main memory)

This must be considered in operating system configuration (e.g. Windows CE).

Depending on Shadowing configuration the effective size may be slightly higher.
Fig. 3   Memory Map (IPC/NETSBC-6A board)

3.2.2. General I/O Layout and Configuration

The NETSB's 64 kbyte I/O address space is mapped to the PC/104 bus address space as indicated in the table below. Note that 16 bit address decoding should be used on all PC/104 expansion boards to make efficient use of the I/O address space.

Address	Device / Register	Remarks
0000..000Fh	Slave DMA	
0020h	PIC Master – Command/Status	
0021h	PIC Master – Command/Status	
0040..0043h	PIT

03B0..03BBh	VGA Registers (MDA)	
03BC..03BFh	Reserved for LPT3	
03C0..03CFh	VGA registers (EGA)	
03D0..03DFh	VGA registers (CGA)	
03E0..03E7h	free	
3E8..03EFh	free	avail. on PC/104 bus
03F0.0.3F2h	Reserved for Floppy 1	
03F4..03F5h	Reserved for Floppy 1	
03F6h..03F7h	Primary IDE Channel	
03F7h	Reserved for Floppy 1	
03F8..03FFh	COM1	
0481..0483h	DMA High Page	
0487h	DMA High Page	
0489..048Bh	DMA High Page	
048Fh	DMA High Page	
04D0h	PIC Level/Edge	
04D1h	PIC Level Edge	
0500..07FF	Runtime Registers Super I/O	
0A78h	Plug'n Play configuration port	
0CF8..0CFFh	PCI configuration registers	
7600..76FFh	free	avail. on PC/104 bus
7700..77FFh	free	avail. on PC/104 bus
8200..821Fh	NETSBC-6A system registers	
8220..827Fh	free	avail. on PC/104 bus
0D000..0EFFFh	reserved for PCI devices (VGA, Ethernet, USB, IDE)	

Tab. 2   I/O Address Space Layout

Only the I/O addresses which are marked with "avail. On PC/104 bus" can be accessed on the aforementioned connector and be used for additional peripherals. The other unused I/O space can't be accessed because these cycles are claimed by the integrated South Bridge and not by the PCI/ISA Bridge.

3.3.   AMD Geode LX800 CPU

The AMD Geode LX processors are highly integrated x86 processors for embedded applications. The LX800 integrates the core microprocessor and the north bridge into one device.
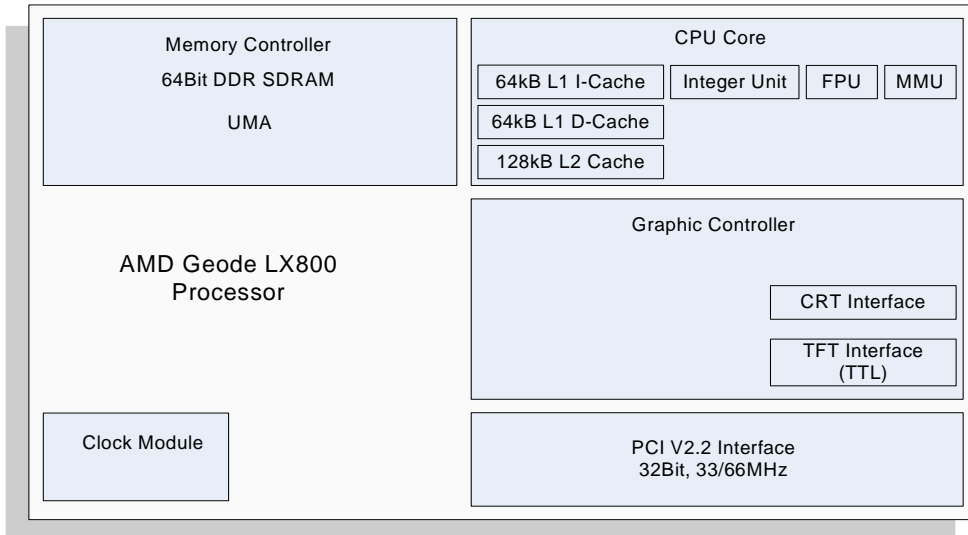

Fig. 4   AMD Geode LX800 processor

3.4.   AMD CS5536 Companion Chip

The AMD Geode CS5536 companion device is designed to work with the LX800 microprocessor.
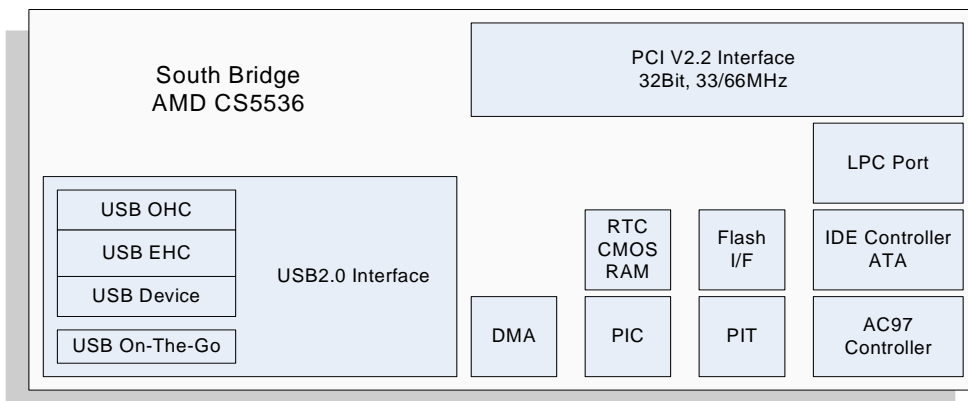

Fig. 5   AMD Geode CS5536 companion chip

3.5. PCI Devices

All devices follow the PCI 2.2 specification. The BIOS (and/or OS) control memory and I/O resources.
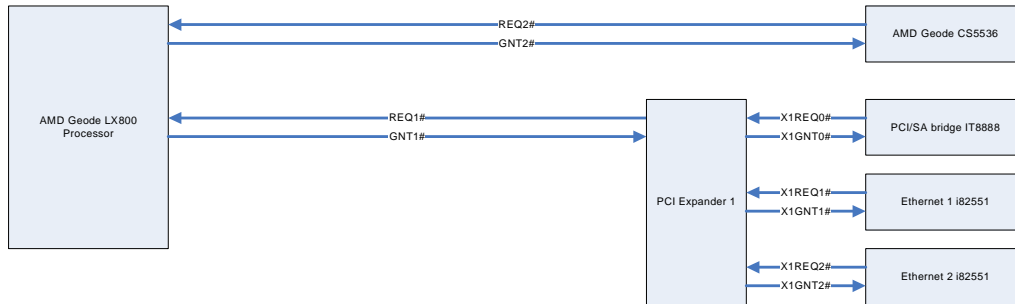

Fig. 6   PCI System

PCI Device (IDSEL)	Device ID	PCI IRQ	REQ / GNT	Comment
Host Bridge	2080h	n/a	2	Integrated in chipset
Graphic Controller	2081h	INTA# (IRQ9)	n/a	Integrated in chipset

IDE	14	-	Primary IDE channel
Free	15	-	Available on PC/104 bus

Tab. 4   Hardware Interrupt Table

3.7. Peripheral Devices

3.7.1. Scope

The peripheral devices described in this chapter are the core features of the NETSBC-6A board. Meaning that they're available on all the derivates. Special features implemented only on one special board are described in a separate chapter of this documentation.

3.7.2. Socket Memory

The NETSBC-6A features a DIL32 socket (P9) for user insertable memory devices like SRAM, NVRAM and EEPROM products. Supported devices and corresponding configuration is listed in the table below, maximum access time allowed is 150 ns for all devices. Note that the Socket Memory base address, size and enabling must also be configured by software (BIOS).

syslogic

Memory Type	Manufacturer and Order Code	J6 Setting (pins 8, 9,10,12 only)	J4 Setting
SRAM	**Static RAM (5V)**	**5V, Battery Backup enabled**

Tab. 5   Socket Memory Configuration

Important Note

Do not insert devices not listed. This could damage the hardware.

Important Note

For DiskOnChip device support plese contact the manufacturer.

⬡ **syslogic**

Important Note

When inserting a 28 pin device into the 32 pin socket, pin 1 of the 28 pin device must be positioned at pin 3 of the DIL32 socket, otherwise the hardware may get damaged.

3.7.3. VGA Interface

The VGA signals are available on the High Density DVI-D connector connector P5 for direct connection of VGA compatible monitors. The controller uses the standard VGA register interface. All configuration is done by software (BIOS, VGA-BIOS).

3.7.4. DVI Interface

The DVI (Digital Visual Interface) signals are available on the High Density DVI-D connector P5 for direct connection of DVI compatible monitors. The signals from the SDVO (Serial Digital Video Out) port are converter into DVI signals from the The controller uses the standard VGA register interface. All configuration is done by software (BIOS, VGA-BIOS).

Tab. 6   DVI-D connector P5

Important Note

Be careful when using the VGA or video signals on expansion boards. Special design and layout precautions must be met for these high speed analog signals.

Maximum cable length allowed for VGA connection is 15 m.

Use high quality VGA cables (with coaxial wires for RGB signals) for maximum EMI protection.

3.7.5. IDE/CompactFlash-Interface

The IDE interface is setup as Primary IDE Channel with standard PC address decoding and using hardware interrupt 14. It supports 2 external devices on a single connection, one configured as master the other as slave. Alternatively one external device may be replaced by an on board pluggable CompactFlash card. The IDE timing is setup by software (BIOS autodetection).

The IDE interface provides the following configuration options:

Configuration Options

Jumper	Configuration	Remarks
J6	Pin 2-4 open = on board CompactFlash is slave	don't care if only
	Pin 2-4 closed = on board CompactFlash is master	external devices
		are connected.

Tab. 7   IDE Configuration Options

Device Connection

External IDE devices are connected through the standard 2x20 pin header P7. A CompactFlash card may be directly plugged in the on board CompactFlash connector P8.

Pin Number	Signal	Pin Number	Signal
1	RST#	2	GND
3	HD7	4	HD8
5	HD6	6	HD9
7	HD5	8	HD10
9	HD4	10	HD11
11	HD3	12	HD12
13	HD2	14	HD13
15	HD1	16	HD14
17	HD0	18	HD15
19	GND	20	NC
21	DRQ	22	GND
23	HIOW#	24	GND
25	HIOR#	26	GND
27	IOCHRDY	28	GND
29	DACK#	30	GND
31	IRQ	32	NC
33	HA1	34	PDIAG#
35	HA0	36	HA2
37	HCS0#	38	HCS1#
39	DASP#	40	GND
41	VCC	42	VCC
43	GND	44	NC

Tab. 8   IDE Connector P7 (2x22 pin)

Important Notes

Do not connect 2 external devices and a CompactFlash card together. This may damage the system and the IDE devices.

Note

The NETSBC-6A offers a 5V supply (not fused) for direct plugin IDE/CompactFlash adapters. Max. allowed current drawing is 100mA.

3.7.6. Serial Ports 1/2

Two serial ports are available. The serial ports have fixed base addresses of 3F8H for COM1 and 2F8H for COM2. COM1 uses hardware interrupt 4 and COM2 uses hardware interrupt 3.

Device Connection

The Serial Port COM1 is available on the DSUB9 connector P14A (bottom).

The Serial Port COM2 is available on the DSUB9 connector P15A (bottom).

Pin Number	Signal	Remarks
1	DCD*	
2	RXD	
3	TXD	
4	DTR*	
5	GND	
6	DSR*	
7	RTS*	
8	CTS*	
9	RI*	

Tab. 9   Serial Ports COM1 and COM2

Optional RS485 Interface on COM2 Port

Important Note

This chapter will be added in a future release.

3.7.7. USB Interface

The NETSBC-6A features an OHCI/EHCI compatible USB Hostcontroller having assigned the base address and IRQ at boot time by the PCI-BIOS. Four channels are available where as channel 3 can be configured as a device.

Device Connection

The USB interface uses two dual USB connectors. USB2 and USB3 are also availabe on an internal header (J10).

P20 (top) Pin Number	USB channel 0 Signal	P20 (bottom) Pin Number	USB channel 1 Signal
1	VBUS	1	VBUS
2	D-	2	D-
3	D+	3	D+
4	GND	4	GND

Tab. 1   USB Interface Connector P20

P21 (top) Pin Number	USB channel 2 Signal	P21 (bottom) Pin Number	USB channel 3 Signal
1	VBUS	1	VBUS
2	D-	2	D-
3	D+	3	D+
4	GND	4	GND

Tab. 2   USB Interface Connector P21

The USB signals for channel 1 and 2 are also available on the internal header J10. A standard USB Flash Drive can be connected to this header.

J10 Pin Number	USB channel 2 Signal	P15 Pin Number	USB channel 1 Signal
1	VBUS	2	VBUS
3	D-	4	D-
5	D+	6	D+
7	GND	8	GND
9	Not connected	10	Not connected

Tab. 10 USB Interface Connector J10 (2x5pin)

3.7.8.   PS/2 Keyboard/Mouse Interface

The keyboard signals are only available on an internal header J6. However a MiniDIN (PS/2 connector) can be mounted optionally instead of P21 (USB channels 2 and 3). The controller uses hardware interrupt 1 for the keyboard and hardware interrupt 12 for the mouse. The following configuration options are provided:

Configuration Options

Jumper	Configuration	Remarks
J6	Pin 1-3, 2-4 closed = Keyboard signals on P13	Only if P13 is
	Pin 3-5, 4-6 closed = Mouse signals on P13	mounted

Tab. 11 Keyboard/Mouse Configuration Options

Device Connection

The standard PS/2 connector P13 is not mounted by default. The PS/2 singals are available on the internal header J6 (2x5 pin). P13 is used (if available) for direct connection of the keyboard or mouse (depending on jumper configuration).

Pin Number	Signal	Pin Number	Signal
1	KBDATA	2	KBCLK
3	P3-1	4	P3-5
5	MDATA	6	MCLK
7	BM1 / P3-2	8	BM0 / P3-6
9	GND	10	+5V (not fused)

Tab. 12 Keyboard/Mouse internal Header J6 (2x5 pin)

Important Note

Do not connect the Boot Mode Pins on P3 or P4. These signals may only be used by the Boot Loader Key to start the Boot Loader.
The Boot Loader Key (BOOTPLUG) shortens Pin 3 and 6 of P13.

Important Note

Maximum cable length allowed for keyboard and mouse connection is 3 m.
Use shielded cables for maximum EMI protection.

3.7.9. Ethernet Interfaces

The NETSBC-6A features two PCI Ethernet 10/100 baseT controller having assigned the base address and IRQ at boot time by the BIOS. There are two LED's (yellow and green) integrated into the RJ45 connector. The green LED indicates speed. The LED will be on at 100Mbps and off at 10Mbps. The yellow" activity" LED indicates either transmit or receive activity. When activity is present, the LED is on; when no activity is present, the LED is off.
No configuration options are available for the ethernet device.

Device Connection

The Ethernet interface uses the standard RJ45 connector P18 and P19 for 100Ω shielded or unshielded Twisted Pair cabling.

Pin Number	Signal	Remarks
1	TX+	
2	TX-	
3	RX+	
4-5	line termination	
6	RX-	
7-8	line termination	

Tab. 13 Ethernet Twisted Pair Interface Connector P18 and P19 (RJ45)

3.7.10. Watchdog

The watchdog timer is configurable for 100 ms or 1.6 s timeout. Once timed out, it may activate the NETSBC-6A's hardware.

Configuration Options

Jumper	Configuration	Remarks
J6	Pin 4-6 open = 1.6 s	
	Pin 4-6 closed = 100 ms	

Tab. 14 Watchdog Configuration Options

3.7.11. Power Supply

The processor and its peripherals are powered by a non-isolated, integrated power supply which generates all the necessary voltages.
See paragraph 6.2 for connection details.

Configuration Options

Switch	Configuration	Remarks
S12:1/2	on/off = external power on/off input pin	P1:3
	off/on = external power fail input pin	

Tab. 15   Power Supervision Configuration Options

In some application it can be useful when the digital ground plane (GND) is connected to shield. In order to short circuit the two power planes two jumpers have to be placed on J16.

Jumper	Configuration	Remarks
J100	Pin 1-2 closed = shield and GND connected	
	Pin 3-4 closed = shield and GND connected	

Tab. 16 Power plane short circuit

3.7.12. Power supervision

This feature is implemented on systems with #3 or higher.

The power management control unit (PCU) contains of RISC microcontroller and is implemented on the base board.

The PCU can be operated in two modes: power fail mode or remote on/off mode.

The following two chapters describe their functionality in detail.

3.7.13. Power Fail

In power fail mode the microcontroller monitors the external power fail signal. The state of power fail signal can be access through the status register, I/O 8200h.

Application example
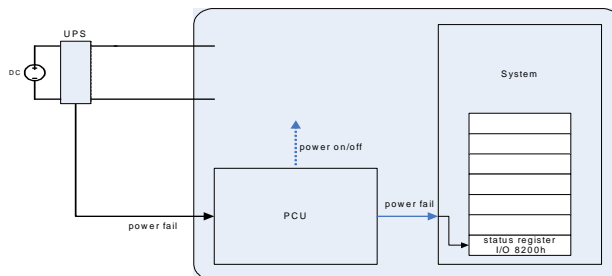

Fig. 7   Typical power fail application

The application has to poll the power fail flag and call different functions according to the state of the flag.
Fig. 8   Typical power fail flow

3.7.14. Remote On/Off

With the remote on/off function the system can be switched on and of through an external control signal. When active the internal software goes from the run state into the shutdown state. After a predefined timeout the PCU switches the main power supply off. The timeout can be configured through S14.

Config switch position	$t_{debounce\_on}$ On debouncing (setup)	$t_{debounce\_off}$ Off debouncing (hold)	$t_{startup}$ Hold time until switch off signal is routed to processor, if system is still booting	t_{hard_off} Timeout until switch off signal is generated from processor (after that hard off)
0	-	-	-	-
1	2 s	60 s	5 s	1 min
2	2 s	60 s	60 s	5 min
3	2 s	60 s	30 min	2 h
4	2 s	60 s	2 h	2 h
5 – F	N/a	n/a	n/a	n/a

Tab. 17 PCU timing configuration through S14

When switch S14 is in position 0 the PCU is in bypass mode.

Application example
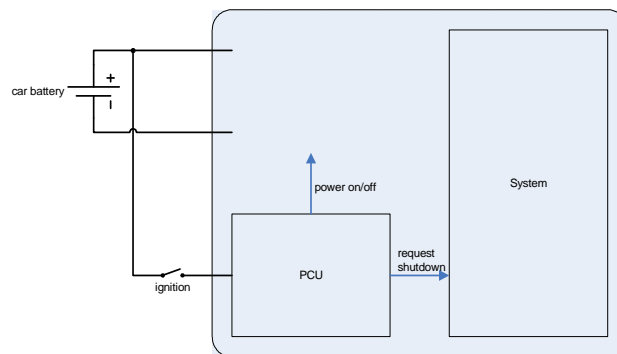

Fig. 9   Application example: CAR PC

Startup sequence
Notes:

1) VIN supply must be present

2) Ignition on starts debouncing sequence

3) glitches/bounces are ignored during $t_{debounce\_on}$

4) if ignition signal is stable after $t_{debounce\_on}$, supply is switched on and the system starts

5) during $t_{startup}$, ignition switch is ignored
Note: system might have finished booting well in advance before startup phase is over

6) after $t_{startup}$, the power management circuit resumes tracking of the ignition switch signal

Fig. 10   Startup timing diagram

Forced shutdown sequence

Ignition off starts debouncing sequence glitches/bounces are ignored during $t_{debounce\_off}$

if ignition signal is stable after $t_{debounce\_off}$, powerfail is indicated to the system

if the operating system ignores the powerfail signal or is not able to shut down within t_{hard_off}, a stop signal is sent from the power management unit to the power supply which cuts off power to the system

VIN supply may be removed now

Fig. 11   Shutdown timing diagram

Important Notes

The operating system must support the remote on/off function.

Power Fail

A power fail can occur on two occasions: the external ipnut is pulled low or the power supply voltage drops below approx. 8.9Vdc.

Connector	Configuration	Remarks
P1:3	voltage > 2.5Vdc or left open = normal operation voltage < 2.5Vdc = power fail	S12:1/2 = off/on
P1:1-2	voltage >= 9.0Vdc = normal operation voltage < 8.9Vdc = power fail	S12:1/2 = off/on

Tab. 18   Power Fail

Remote On/Off

In some applications it is desirable that when a under-voltage event occurs that the systems shuts down.

Connector	Configuration	Remarks
P1:3	voltage > 2.5Vdc = normal operation voltage < 2.5Vdc or left open = shutdown	S12:1/2 = on/off
P1:1-2	voltage >= 9.0Vdc = normal operation voltage < 8.9Vdc = shutdown	S12:1/2 = on/off

Tab. 19   Remote On/Off

Important Note

The functions mentioned above are only available in systems with revision 3 or higher

3.7.15. Configurations Switches

There are two rotary Hex-Switches for customer use available, where only S1 can be accessed by removing the left side cover. The values can be read from a register at I/O address 820Ch

3.7.16. Factory Programming Header

The programmable logic devices on the NETSBC-6A board are factory programmed using some pins of the internal header J5. These pins **must not** be connected by the user.

Pin Number	Signal	Remarks
1	TCK	do not use
3	TDO	do not use
5	TMS	do not use
7	TDI	do not use

Tab. 20 Factory Programming Header J5 (2x5 pin)

3.7.17. LPC Header

The internal LPC (Low Pin Count) bus is available on the header J3. These pins **must not** be connected by the user.

Pin Number	Signal	Remarks
1	AD0	do not use
2	AD1	do not use
3	AD2	do not use
4	AD3	do not use
5	FRAME#	do not use
6	RST#	do not use
7	CLK	do not use

Tab. 21 LPC J3 (1x7 pin)

3.7.18. Isolated Power Supply

Instead of the synchronous buck controller a DC/DC converter can be soldered onto the board for isolating the power supply. The input range will be reduced. For further information please contact the manufacturer

3.8.   Optional Functions

There are several functions on the NETSBC-6A which aren't implemented on the standard Syslogic product:
- isolated power supply
- parallel port
- RS485 interface at COM2
- up to two isolated CAN interfaces
- 24bit LVDS (6bit/8bit) including brightness control
- AC97 audio port

For further technical information and customization details please contact Syslogic sales.

3.9. Hardware Limitations

3.9.1. PCI Bus Limitations

– Only 3.3V PCI bus
– PCI bus speed is limited to 33MHz

3.9.2. ISA Bus Limitations

– The interrupt lines are pulled up with 8k2 resistors to Vcc (EISA specification) instead of 2k2 (IEEE 996)
– NMI (IOCHCK#) is not supported on the PC/104
– Only a predefined amount of I/O addresses are available on the PC/104 bus, please refer to the appropriate chapter for details

4 Programming Information

4.1. Overview

The programming of the NETSBC-6A board is done with standard memory and I/O read and write operations. Most configuration options are handled by the BIOS. For detailed information refer to the NETSBC-6A firmware documentation and other related documents as listed in paragraph 1.4.

4.2. Interrupt, Memory and I/O Resources

4.2.1. Interrupt Resources

Please refer to chapter 3.6 for the table showing the usage of the NETSBC-6A's interrupts.

4.2.2. Memory Resources

The general memory layout is shown in paragraph 3.2.1. The configuration of the memory layout is done by programming Geode internal configuration registers and board configuration registers (see paragraph 4.2.3). This is done completely by the BIOS on system startup and must not be changed during operation. For operating systems requiring memory configuration (e.g. Windows CE) the memory layout shown in paragraph 3.2.1 must be considered.

4.2.3. I/O Resources

This paragraph describes only the NETSBC-6A system register and support functions not directly related to a specific peripheral device. The general I/O layout is shown in paragraph 3.2.2. Peripheral devices are discussed in paragraph 0. Note that the Socket Memory related registers are programmed by the BIOS on system startup and must not be changed during operation except for the Socket Memory Window Mapping Register in case of user controlled memory mapping (allowing access to 512kbyte Socket Memory as eight 64kbyte blocks in the Socket Memory window below 1M in Real Mode).

Address	Device / Register	Remarks

Tab. 22 NETSBC-6A System Registers

Status Register

Reading I/O Register 8200h:

D7	D6	D5	D4	D3	D2	D1	D0
OVERTMP*	LOBAT*	1	WDG*	ERRFLAG*	ATTFLAG*	ERRINT*	PF*

Description:

- PF*:   Power Fail Status

    0 = Power Fail occurred

    1 = normal operation
- ERRINT*: Error Interrupt Status

    0 = Error Interrupt pending on this module

    1 = no Error Interrupt pending on this module
- ATTFLAG*:   Attention Status Flag (for polled applications)

    not used, returns 1
- ERRFLAG*:   Error Status Flag (for polled applications)

    not used, returns 1
- WDG*:   Watchdog Status Flag

    0 = Watchdog has timed out

    1 = Watchdog running or disabled

    Reset by issuing a hardware reset (see register 8204H)
- LOBAT*:   Battery Status Flag

    0 = Battery voltage low

    1 = Battery voltage ok
- OVERTMP*:   Temperatur Sensor Status Flag

    0 = programmed temperatur limit reached

    1 = temperatur ok (below limit)

Writing I/O Register 8200h:

D7	D6	D5	D4	D3	D2	D1	D0
reserved	reserved	reserved	reserved	reserved	reserved	reserved	reserved

Description:

- reserved: reserved, always write 0

Control Register

Reading I/O Register 8201h:

D7	D6	D5	D4	D3	D2	D1	D0
TRIGGER	WDTRIG	WDNMI	STOP	*TRIGSRC*	FREEZE	ERREN*	ATTEN*

Description:
- ATTEN*: Attention Interrupt Enable
  - not used, returns 1
- ERREN*: Error Interrupt Enable (IOCHCK* routed to NMI)
  - 0 = Error interrupt on NMI enabled (always enabled)
- FREEZE: not used, returns 1
- *TRIGSRC: NETIPC TRIGGER* Signal Source Select*
  - *always 1*
- STOP: NETIPC STOP* Signal State
  - 0 = STOP* inactive (high)
  - 1 = STOP* active (low)
- WDNMI: Watchdog action Select
  - 0 = Watchdog timeout activates hardware reset
  - 1 = not supported
- WDTRIG: Watchdog Trigger
  - any state change triggers the watchdog (timeout reset)
- *TRIGGER: Direct Control for NETIPC TRIGGER* Signal*
  - *always 1*

Writing I/O Register 8201h:

D7	D6	D5	D4	D3	D2	D1	D0
TRIGGER	WDTRIG	WDNMI	STOP	*TRIGSRC*	FREEZE	ERREN*	ATTEN*

Description:
- ATTEN*: Attention Interrupt Enable
  - not used
- ERREN*: Error Interrupt Enable (IOCHCK* routing to NMI)
  - 0 = enable Error interrupt on NMI (always enabled)
- FREEZE: not used
- *TRIGSRC: NETIPC TRIGGER* Signal Source Select*
  - *always write 1*
- STOP: NETIPC STOP* Signal State
  - 0 = STOP* inactive (high)
  - 1 = STOP* active (low)
- WDNMI: Watchdog action Select
  - always write 0
- WDTRIG: Watchdog Trigger
  - any state change triggers the watchdog (timeout reset)

- TRIGGER: Direct Control for NETIPC TRIGGER* Signal
     (if enabled by TRIGSRC bit in Control Register)
          always write 1

The Trigger feature is not supported on the IPC/NETIPC-6 boards.

TRIGSRC	TRIGGER	TRIGGER* Source
0	0	Square Wave Output (SQW) of Real Time Clock Device
0	1	Timer (8254) Channel 2 Output gated with Port B bit 1 (Speaker Enable)
1	X	TRIGGER bit directly controls the TRIGGER* output

Tab. 23 TRIGGER* Source Selection

Function ID Register

Reading I/O Register 8202h:

4.3.   Peripheral Devices

4.3.1.   VGA-Interface

The VGA interface uses the standard PC/AT VGA register set. For detailled programming information please refer to the IBM PC/AT Technical Reference or similar documentation.
Low level programming is handled by the VESA compatible VGA-BIOS.

4.3.2.   IDE-Interface

The IDE interface uses the standard PC/AT register set. For detailled programming information please refer to the IBM PC/AT Technical Reference, ATA/ATAPI standards (ANSI) or similar documentation.

4.3.3.   Serial Ports

The Serial Port interfaces use the standard PC/AT register set. The Serial Port controller is compatible with the standard 16C550A UART with 16 byte receive and transmit FIFOs. For detailed programming information please refer to the IBM PC/AT Technical Reference, the Texas Instruments TL16C550C datasheet or similar documentation.

4.3.4.   Keyboard/Mouse Interface

The Keyboard/Mouse interface uses the standard PC/AT register set. The keyboard controller is compatible with the standard Intel 82C42 device with integrated keyboard host controller

firmware. For detailed programming information please refer to the IBM PC/AT and PS/2 Technical Reference, the Intel 82C42PC datasheet or similar documentation.

4.3.5. Ethernet Interfaces

On the NETSBC-6A board the Ethernet interfaces use the Intel 82551 Ethernet Controller. For detailed programming information and drivers check www.syslogic.ch and www.intel.com .

4.3.6. Temperature Sensor

The Temperator Sensor is built up using an LM75 compatible temperature sensor programmable through an I2C interface. The I2C interface programming is done through the I2C Register of the NETSBC-6A. The LM75 can be accessed at the I2C address 00h. For detailled programming information please refer to the National Semiconductor LM75 datasheet or similar documentation.

Poweron default setting for OVERTMP* is 80°C chip temperature.

I2C Address	Device	Remarks
00h	LM75	

Tab. 24 I2C Address Space

4.3.7. Watchdog

The watchdog is disabled by default on poweron and must be enabled either by the BIOS or by the application program.

If watchdog programming is done from application software level, before enabling the watchdog by setting the WDEN bit in the NETIPC Setup Register.

The watchdog generates a hardware reset if it is not triggered within the configured timeout window by writing the WDTRIG bit in the NETSBC-6A Control Register. The application must check the WDG* bit in the NETSBC-6A Status Register uppon startup to identify the Watchdog as the source of the reset, and it must issue a hardware reset (by writing the value 0a5h to the NETSBC-6A Option ID Register) to clear the WDG* flag. Otherwise the system resets again as soon as the Watchdog is started.

Sample code showing the initialisation and triggering of the watchdog is available in the free IPC/IOCOMSW-1A package.

For watchdog support on the BIOS level please consult the NETIPCFW firmware documentation. In this case initialisation is done by the BIOS on startup and triggering is done through BIOS API INT 15h calls.
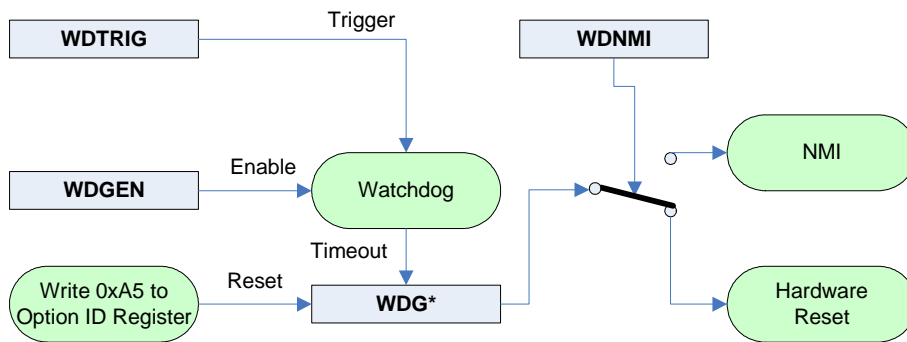

Fig. 12   Watchdog Blockdiagram

The watchdog can only initiate a hardware reset. The NMI option is not supported.

5 Enclosure, Assembly and Mounting

5.1. IPC/COMPACT6-SL Dimensions

The enclosure can house a complete industrial control system with many basic functions. The enclosure with its internal electronic system meets EMI/RFI electromagnetic standards according to the European "CE"- requirements (see paragraph 1.5).
Fig. 13 IPC/COMPACT6-1A

> **Important Notes**
>
> Before assembling the whole enclosure with the electronic modules please read through the following paragraphs containing information about the assembling of the system.

5.2. Internal Cabling

No internal cabling has to be done.

5.3. Serviceable Parts

The IPC/COMPACT6-SL contains two removable parts insie:

- Backup-Battery
- CompactFlash card (has to be ordered separately)

In order to exchange these parts, you must remove the cover by executing steps 1 and 2 of the following instructions.

Important Notes

When opening the enclosure you're about to handle ESD sensitive devices. Be sure that appropriate precautions have been made to your working environment. from its socket.

Important Notes

- The battery socket is coded, no wrong insertion of the backup battery is possible.
- Handle the flash memory module with care. In order to simplify the removal of the memoory module a small commercially available tape can be applied to the compact flash which allows an easy grab of the module.

1.   Remove 4 torx screws (M2x5, BN3803) on the side of the case.

2.   Remove the side cover.

3.   Exchange the battery or the Compact Flash card.

◇ syslog**ic**

5.1. Final Mounting of the Enclosure

As mentioned in chapter 1.4.1 there for additional mounting kits which have to be ordered separately. The mounting kits help to install the IPC/COMPACT7-SL into your electric control cabinet.

Important Notes

Be sure to use the correct screws; screws which are too long can damage the boards inside of the enclosure.

5.1.1. Rear Mounting

Product order code: IPC/MKITCP-1A
Document order code: DOC/IPC_MKITCP-1AE

Fig. 15 Rear mounting of the IPC/COMPACT6-SL (product image may vary)

5.1.2. Vertical Bottom Mounting

Product order code: IPC/MKITCP-2A
Document order code: DOC/IPC_MKITCP-2AE

Fig. 16   Vertical bottom mounting of the IPC/COMPACT6-SL (product image may vary)

5.1.3. Horizontal Bottom mounting

Product order code: IPC/MKITCP-2C
Document order code: DOC/IPC_MKITCP-2CE

Fig. 17   Horizontal bottom mounting of the IPC/COMPACT6-SL (product image may vary)

5.1.4. DIN Rail Mounting

Product order code: IPC/MKITCP-2E
Document order code: DOC/IPC_MKITCP-2EE

Fig. 18   One possible way of mounting the IPC/COMPACT6-SL onto the DIN-Rail

6 Installation and Cabling

6.1. Introduction

Installation and cabling of the IPC/COMPACT-SL system has to be done with great care; the correct cabling is essential for high operational reliability and the correct grounding is necessary for protection. To meet the requirements of "CE"-certification all cables have to be shielded. The enclosure has to be connected to ground via the DIN-rail.

Important Notes

To meet the requirements of RFI "CE"-cerification, correct mounting, installation and cabling of the IPC/COMPACT6-SL system according to these guidelines is absolutely necessary.

6.2. Powering the IPC/COMPACT-SL System

The "logic voltage", i.e. the power driving the electronic circuits (CPU and base board) is applied from a 24VDC power supply (10VDC...30VDC). The internal power supply converts the input voltage to the logic voltage level. Remember that the power supply is unisolated. For an isolated version please contact the manufacturer. The input voltage is applied with a 3 or 4 pin Weidmüller connector, depending on the product version:

Pin Number	Signal	Remarks
1	+24VDC	+10V..+30V
2	+24VDC_AUX	Additional, permanent power supply
3	GND	Ground (/shield)
4	Power Fail/Remote on/off	Power Fail input

Tab. 25 Power supply connector P1 (2x2 pin, product version #4.x)

Pin Number	Signal	Remarks
1	GND	Ground
2	+24VDC	+10V..+30V
3	Power Fail	Power Fail input

Tab. 26 Power supply connector P1 (1x3 pin, product version #1-3)

The connector can be ordered directly at your Weidmüller distributor

⬡ syslogic

Order Code	Type
1001270000	B2L 3.5/04/180F (2x4 pin)
1606650000	BL3.5/3F (1x3 pin)

Tab. 27 Weidmüller power connector

For normal operation the external power supply has to be connected to +24VDC and GND of the connector P1.

See paragraph 3.7.13 and 3.7.14 for use of power fail or remote on/off signal.

When selecting the 24VDC power supply the maximum power dissipation of the system has to be considered.

Important Notes

Please make sure that the input voltage does not exceed 30V otherwise the base board could get damaged. If the input voltage drops below 10V the system doesn't work properly, correct operation cannot be guaranteed. The best efficiency of the power supply can be achieved if the external input voltage is around 24V. Therfore the power loss of the power supply circuitry is at its minimum. When operating the system at high temperatures please make sure that the power supply is around 24V.

The power fail and external shutdown functions (pin 3) are only available on system with revision 3 or higher.

6.3.   Cabling the Interfaces

Fig. 19   Front view with connector markings

Connector Marking	Interface Type
VGA	CRT
USB0/1	USB0 (bottom) / USB1 (top)
USB2/3	USB2 (bottom) / USB3 (top)
ETH1	Ethernet 1 (PCI device 13)
ETH2	Ethernet 2 (PCI device 12)
RST	Reset button
COM1	COM1: RS232
COM2	COM2: RS232 (or RS485)
red LED	(B): Busy
yellow LED	(D): Disk
green LED	(R): Run
PF VDC GND	Power Supply

Tab. 28 IPC/COMPACT6-1E: Connectors

◇ **syslogic**

6.4. Grounding

In some cases it is recommended to connect the shields of the cables to chassis potential at the entry point into the housing cabinet as shown in Fig. 20. If the cables enter a hermetically closed cabinet, use special 360 degree metal clamps (RFI protected types which contact to the cable shield).

Important Notes

Grounding of the cables shields using "pig-tail wires" are not recommended because of their high impedance at high frequencies. It is better to clamp the shields onto a grounded copper rail.
Fig. 20 Additional grounding of the cable shields at the entry point of a cabinet.

6.5. Cabling of Communication Links

If the communication ports are unisolated ports, cable shields have to be connected to chassis potential on both sides of the interconnection cable. If the cable is very long, a thick copper wire (10 mm^2) for potential adjustment is highly recommended. Fig. 21 shows an non isolated system with common chassis ground.

Some of the communication ports are galvanically isolated ports (for more information please refer to the documentation of the base board and the CPU board): in such cases the shield of

the interconnection cable must be wired to chassis potential only on one side of the cable. Fig. 22 shows an isolated system with independent grounds.

Important Notes

Grounding of cable shields using "pig-tails wires" are not recommended because of their high impedance at high frequencies. It is recommended to clamp the shields onto a grounded copper-rail.

Fig. 21   Non isolated communication link with common chassis potential
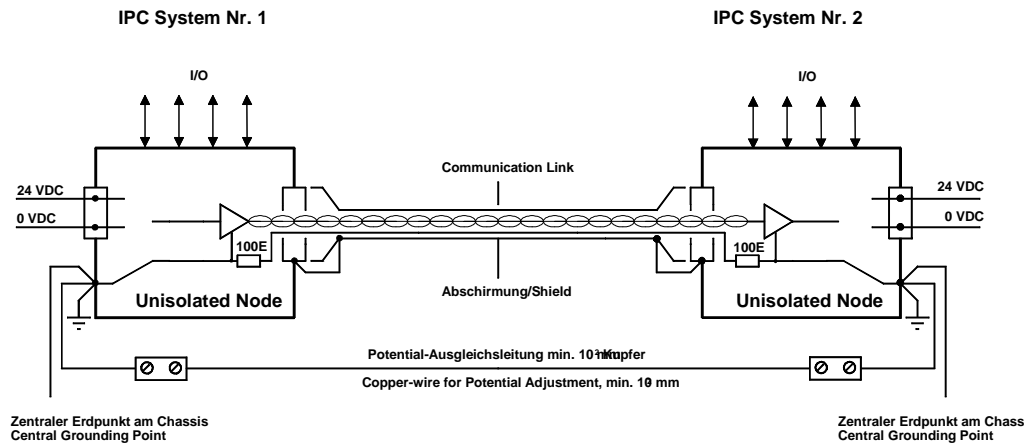

Fig. 22   Isolated communication link

7 Technical Data

7.1. Electrical Data

Important Note

Do not operate the IPC/COMPACT6-SL outside of the recommended operating conditions. Otherwise lifetime and performance will degrade. Operating the board outside of the absolute maximum ratings may damage the hardware.

Absolute Maximum Ratings (over free-air temperature range)

Parameter	Symbol	min	nom	max	Unit
internal power supply voltage	Vcc	-0.5		5.5	Vdc
isolation logic to chassis (AC, 60s, 500m a.s.l., Ta=25°C)		500			Vrms
isolation RJ45 to logic (AC, 60s, 500m a.s.l., Ta=25°C)		1500			Vrms
isolation RJ45 to chassis (AC, 60s, 500m a.s.l., Ta=25°C)		1000			Vdc
creepage distances:					
logic to chassis and PCB boarder		1.0			mm
logic to PC/104 mounting holes		0.5			mm
RJ45 to logic		2.5			mm
RJ45 to chassis and PCB boarder		2.0			mm
storage temperature range	Tst	-40		90	°C

Tab. 29 General Absolute Maximum Ratings

syslogic

Recommended Operating Conditions

Parameter	Symbol	min	nom	max	
external supply voltage	Vext	10.0	24.0	30.0	Vdc
battery backup voltage (Io=100μA)	Vbatt	2.70	3.00	3.60	Vdc
PS/2 connector (P3/P4) power load (+5V)	Ips2			200	mA
operating free-air temperature range (standard products)	Ta	0		55	°C

Tab. 30 General Recommended Operating Conditions

Electrical Characteristics
(over recommended operating range, unless otherwise noted)

Parameter	Symbol	min	Typ	max	Unit
external supply current @ 10Vdc	Iext		0.83	0.91	A
full load power dissipation @ 10Vdc	Pmax		8.30	9.10	W
external supply current @ 24Vdc	Iext		0.35	0.40	A
full load power dissipation @ 24Vdc	Pmax		8.53	9.55	W
Power Fail					
- inactive state	PFhigh	2.7	Vext	Vext	V

7.2. EMI / EMC Specification

7.2.1. Relevant Standards

The IPC/NETIPC-6 has been designed to comply the the following standards:

- – EN 55022   Information technology equipment-
  Radio disturbance characteristics-
  Limits and methods of measurement

- – EN 55024   Information technology equipment-
  Immunity characteristics -
  Limits and methods of measurement

- – EN 61000-6-2   Electromagnetic compatibility (EMC),
  Part 6-2: Generic standards- Immunity for industrial
  environments

- – EN 61000-6-4   Electromagnetic compatibility (EMC),
  Part 6-4: Generic standards – Emission standard for
  industrial environments

7.2.2. Emission

The emission tests are still pending. For furhter information please contact the manufacturer.

Test	Limit	Performance Criteria	Result	Remarks
Stationary interference voltage on the AC voltage terminals V-Network 0.15 – 30 MHz Power supply line Control and singal lines	EN 55022	Class A	pending	Compliant with EN 50121-3-2 (referring to EN 55011)
Radiated E-Field, horizontal and vertical polarized E-Field-Anenna 30 – 100 MHz EUT with all cables	EN 55022	Class A	pending	Compliant with EN 50121-3-2 (referring to EN 55011)

Tab. 33 Electromagnetic Emission

7.2.3. Immunity

The immunity tests are pending. For furhter information please contact the manufacturer.

Test	Standard Test level	Perfromance Criteria	Result	Remarks
Electrostatic discharge (ESD)	EN 61000-4-2			Compliant with
- indirect on coupling plane with contact discharge	6kV Cont.	B	pending	EN 50121-3-2
- direct on case with air and contact discharge	8kV Air (metal case)	B	pending	
EUT with all cables				
Radiated electromagentic field	EN 61000-4-3			Compliant with
80 – 1000 MHz, 80% AM (1kHz)	20V/m	A	pending	EN 50121-3-2
EUT with all cables				
Radiated electromagentic field	EN 50121-3-2			
1.4 – 2.0 GHz, 80% AM (1kHz)	10V/m	A	pending	
2.0 – 2.7 GHz, 80% AM (1kHz)	5V/m	A	pending	
EUT with connection cable				
Fast transients (EFT)	EN 61000-4-4			Compliant with
Common Mode, 5/50ns, repetion freq. 5kHz				EN 50121-3-2
Controll and signal lines	2kV	B	pending	
Power supply	2kV	B	pending	
Slow transients (Surges)	EN 61000-4-5			Compliant with
Pulse form 1.2/50us	2.0kV (ground)			EN 50121-3-2
Power supply	1.0kV	B	pending	
All other signal lines (L>30m)				
Conducted radio frequency	EN 61000-4-6			Compliant with
150kHz – 80MHz, 1kHz 80% AM				EN 50121-3-2
Control and signal lines (L > 3m)	10V	A	pending	
Power supply	10V	A	pending	

Tab. 34 Electromagnetic Immunity

7.3. Environmental Specification

The IPC/COMPACT6 has been designed to meet the the following standards:

− EN 60068-2-27   Basic environmental testing procedures – Part 2-27:
                            Test Ea and guidance: Shock

− EN 60068-2-6 Environmental testing – Part 2-6:
                            Test Fc: Vibration (sinusoidal)

7.4.   Mechanical Data

The enclosure can house a complete industrial control system with many basic functions. The enclosure with its internal electronic system meets EMI/RFI electromagnetic standards according to the European "CE"- requirements (see paragraph 1.5). The figure below shows the IPC/COMPCACT6-SL from its three sides.

| Label	X [mm]	Y [mm]	D [mm]	Label	X [mm]	Y [mm]	D [mm]

8 Firmware

8.1. Software Structure

The x86 CPU board based PC/104 system is based on the following software structure:

BIOS (Basic Input/Output System)

– Power On Self Test (POST)
– Initialization of standard peripheral devices
– Boot procedure for the Operating System
   Note : Refer to the BIOS documentation for detailed information

OS (Operating System)

– Initialization of additional peripheral devices
– Start procedure for the Application Programs
   Note : Refer to the OS documentation for detailed information

Application Programs

– Initialization of NETSBC-6A system, communications and external devices
– Start procedure for the Control Tasks
   Note : Refer to the Application Programs documentation for detailed
   information

8.2. Firmware Functions

The NETSBC-6A board is setup with the firmware IPC/NETIPCFW-6A (see documentation DOC/NETIPCFW6 for details). Some standard PC/AT peripheral devices (e.g. VGA, Keyboard/Mouse, Serial Ports, IDE interface) are directly supported by the BIOS, BIOS extensions and Operating Systems. Some peripheral devices are directly supported by standard communication software (e.g. TCP/IP stacks, TCP packet drivers) others need special programming according to the freely available sample software IPC/IOCOMSW6-1A (e.g. Watchdog). Please refer to the appropriate documentation for detailed information.

8.3. Application Programming Interface (API)

The NETSBC-6A board does not contain any special API besides the installed BIOS and DOS. Refer to the BIOS and Operating System documentation (included in DOC/NETIPCFW6) for API specifications.

8.4.   Operating Systems

Syslogic offers an implementation for the following operting systems (OS):

Debian Linux Distribution
IPC/DEBIAN-40A

Microsoft Windows CE 5.0 and CE6.0
IPC/WINCE-50A
IPC/WINCE-60A

Microsoft Windows XP Embedded
IPC/WINXPE-6A

Others on request.

Important Note

When implementing a BSP for a new OS be sure to use the "Pentium Platform".

◇ **syslog⬡c**

9 Product Revision History

9.1.   Hardware

This paragraph lists the different hardware revisions of the NETSBC-6A boards delivered beginning with the first production lot. Note that prototyping boards are not included and must be returned to factory for upgrade or replacement. All information listed in this document relies on definitive state hardware. Therefore this information may be incompatible with the prototyping board hardware.

Board Identification (see product label)	Product Revision	Logic Revision ID Register	Remarks
IPC/COMPACT6-1A	#1		Original Release, RoHS compliant
IPC/NETSBC-6A	#1	03h	Original Release, RoHS compliant
IPC/COMPACT6-1A	#2		Power fail and shutdown issue solved, RoHS compliant
IPC/NETSBC-6A	#2	03h	Power fail and shutdown issue solved, RoHS compliant
IPC/COMPACT6-1A	#3		DVI interface instead of VGA
IPC/NETSBC-6A	#3		
IPC/COMPACT6-1A	#4		Power Management added
IPC/NETSBC-6A	#4		Power Management Controller added
IPC/COMPACT6-1A	#4.1		Several issue solved
IPC/NETSBC-6A	#4.3	06h	Several issue solved

Tab. 36 Hardware Revision State

9.2.   Firmware

Please refer to the firmware documentation DOC/NETIPCFW6 for detailed information.

Important Note

This document always covers the latest product revision listed in Tab. 36.

Please contact the manufacturers technical support for upgrade options.

10 Manufacturer Information

10.1. Contact

Our distributors and system integrators will gladly give you any information about our products and their use. If you want to contact the manufacturer directly, please send a fax or email message containing a short description of your application and your request to the following address or use one of the information or technical support request forms on our internet homepage:

Syslogic Datentechnik AG
Täfernstrasse 28
CH-5405 Baden-Dättwil / Switzerland
