# 1 Introduction

The PCAN-PCI card enables the connection of a PC with PCI slots to CAN networks. The card is available as a single or dual-channel version. The opto-decoupled versions also guarantee galvanic isolation of up to 500 Volts between the PC and the CAN sides.

The monitor software PCAN-View and the programming interface PCAN-Basic for the development of applications with CAN connection are included in the scope of supply.

Device drivers exist for different operating systems, so programs can easily access a connected CAN bus.

**Tip:** At the end of this manual (Appendix C) you can find a Quick Reference with brief information about the installation and operation of the PCAN-PCI card.

## 1.1 Properties at a Glance

- └ PC plug-in card for PCI slots
- └ 1 or 2 High-speed CAN channels (ISO 11898-2)
- └ Bit rates from 5 kbit/s up to 1 Mbit/s
- └ Compliant with CAN specifications 2.0A (11-bit ID) and 2.0B (29-bit ID)
- └ CAN bus connection via D-Sub, 9-pin (in accordance with CiA® 303-1)
- └ NXP SJA1000 CAN controller, 16 MHz clock frequency
- └ NXP PCA82C251 CAN transceiver
- └ 5-Volt supply to the CAN connection can be connected through a solder jumper, e.g. for external bus converter

- Galvanic isolation on the CAN connection up to 500 V, separate for each CAN channel (only for IPEH-002066 und IPEH-002067)
- Extended operating temperature range from -40 to 85 °C (-40 to 185 °F)

**Note:** This manual describes the use of the PCAN-PCI card with **Windows**. You can find device drivers for **Linux** and the corresponding application information on the provided DVD in the directory branch `Develop` and on our website under [www.peak-system.com/linux](http://www.peak-system.com/linux).

## 1.2 System Requirements

- A vacant PCI slot in the computer
- Operating system Windows 10, 8.1, 7 (32/64-bit), Windows CE 6.x (x86 and ARMv4 processor support) or Linux (32/64-bit)

## 1.3 Scope of supply

- PCAN-PCI card
- Device drivers for Windows 10, 8.1, 7 and Linux (32/64-bit)
- Device driver for Windows CE 6.x (x86 and ARMv4 processor support)
- CAN monitor PCAN-View for Windows
- Programming interface PCAN-Basic for developing applications with CAN connection
- Programming interfaces for standardized protocols from the automotive sector
- Manual in PDF format

## 2 Installing the Software and the Card

This chapter covers the software setup for the PCAN-PCI card in Windows and the installation of the card in the computer.

Install the driver before you install the card.

▶ Do the following to install the driver:

1. Start `Intro.exe` from the supplied DVD.  
The navigation program starts.
2. Select in the main menu **Drivers** and click on **Install now**.
3. Confirm the message of the User Account Control related to "Installer database of PEAK Drivers".  
The driver setup starts.
4. Follow the program instructions.

▶ Do the following to install the card:

**Attention!** Electrostatic discharge (ESD) can damage or destroy components on the card. Take precautions to avoid ESD.

1. Shut down the computer.
2. Disconnect the computer's power supply.
3. Open the computer case.
4. Insert the PCI card into an available PCI slot.
5. Close the computer case.
6. Reconnect the computer power supply.
7. Turn on the computer and start Windows.

Windows detects the new hardware and completes the driver installation.

▶ Do the following to check the operational readiness:

1. Open the Windows Start menu.
2. Type `peakcp1` and press .

The information window for PEAK hardware appears. The plug-in card must be displayed in the table on the **CAN Hardware** tab.

## 3 Connecting the CAN Bus

### 3.1 Connection over D-Sub Connector

A High-speed CAN bus (ISO 11898-2) is connected to the 9-pin D-Sub connector. The pin assignment for CAN corresponds to the specification CiA® 303-1.

Figure 1: Position of the CAN connectors CAN 1 (lower position) and CAN 2 (upper position).

Figure 2: Pin assignment of High-speed CAN connection (view onto a male connector on the PCAN-PCI card)

Low power devices (e.g. bus converters) can be supplied directly with 5 volts over pin 1 and/or pin 9 of the CAN connector. Pin 1 and/or pin 9 are not in use at the delivery state. For more information see the next section 3.2.

**Tip:** You can connect a CAN bus with a different transmission standard via a bus converter. PEAK-System offers different bus converter modules (e.g. PCAN-TJA1054 for a Low-speed CAN bus according to ISO 11898-3).

## 3.2 Voltage Supply of External Devices

External devices with low power consumption (e.g. bus converters) can be directly supplied via the CAN connector (independently for each connector on the dual channel version). With a solder bridge per CAN channel on the PCAN-PCI board, a 5-Volt supply can optionally be routed to pin 1 and/or pin 9 of the D-Sub connector.

The opto-decoupled versions of the card contain an interconnected DC/DC converter. Therefore, the current output is limited to about 50 mA.

▶ Do the following to activate the voltage supply:

**Risk of short circuit!** Solder with great care to avoid unwanted short circuits on the card.

**Attention!** Electrostatic discharge (ESD) can damage or destroy components on the card. Take precautions to avoid ESD.

Set the solder bridge(s) on the card according to the desired settings.

Figure 3 shows the solder field positions on the card. The table below contains the possible settings.

Figure 3: Position of the solder fields on the board’s bottom side for a 5-Volt supply at the CAN connection

D-Sub connector	Solder field	5-Volt supply			
		Without (Standard)	Pin 1	Pin 9	Pin 1 and pin 9
CAN 1	LJ21				
CAN 2	LJ22				

**⚠ Risk of short circuit!** The 5-Volt supply is not protected separately. Therefore, turn off the computer before you connect and disconnect CAN cables or peripheral systems.

## 3.3 Cabling

### 3.3.1 Termination

The High-speed CAN bus (ISO 11898-2) must be terminated with 120 ohms at both ends. The termination prevents interfering signal reflections and ensures the proper operation of the transceivers of the connected CAN nodes (CAN interfaces, control devices).

The PCAN-PCI card does not have an internal termination. Use the card on a terminated CAN bus.

### 3.3.2 Example of a Connection

Figure 4: Simple CAN connection

This example shows a connection between the PCAN-PCI card and a control unit. The connection cable is terminated with 120 ohms at both ends.

### 3.3.3 Maximum Bus Length

High-Speed-CAN networks may have bit rates of up to 1 Mbit/s. The maximum bus length depends primarily on the bit rate.

The following table shows the maximum possible CAN bus length at different bit rates:

Bit rate	Bus length
1 Mbit/s	40 m
500 kbit/s	110 m
250 kbit/s	240 m
125 kbit/s	500 m
50 kbit/s	1.3 km
20 kbit/s	3.3 km
10 kbit/s	6.6 km
5 kbit/s	13.0 km

The listed values have been calculated on the basis of an idealized system and can differ from reality.

## 4 software and API

This chapter covers the provided software PCAN-View and the programming interface PCAN-Basic.

### 4.1 Monitor Software PCAN-View

PCAN-View is simple Windows software for viewing, transmitting, and logging CAN and CAN FD messages.

**Note:** This chapter describes the use of PCAN-View with a CAN adapter.

Figure 5: PCAN-View for Windows

▶ Do the following to start and initialize PCAN-View:

1. Open the Windows Start menu and select **PCAN-View**.

The **Connect** dialog box appears.

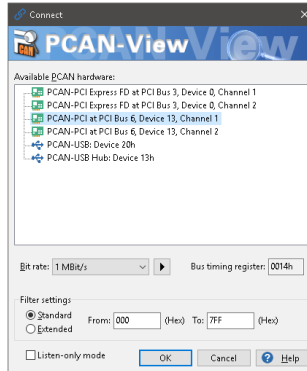

Figure 6: Selection of the specific hardware and parameters

2. Select an interface from the list.
3. From the drop-down list, select the **Bit rate** that is used by all nodes on the CAN bus.

**Tip:** You can create custom bit rates by using the button (▶).

4. Under **Filter settings** you can limit the range of CAN IDs to be received, either for standard frames (11-bit IDs) or for extended frames (29-bit IDs).
5. Activate the **Listen-only mode** if you do not actively participate in the CAN traffic and just want to observe. This also avoids an unintended disruption of an unknown CAN environment (e.g. due to different bit rates).
6. Confirm the settings in the dialog box with **OK**. The main window of PCAN-View appears (see Figure 7).

### 4.1.1 Receive/Transmit Tab

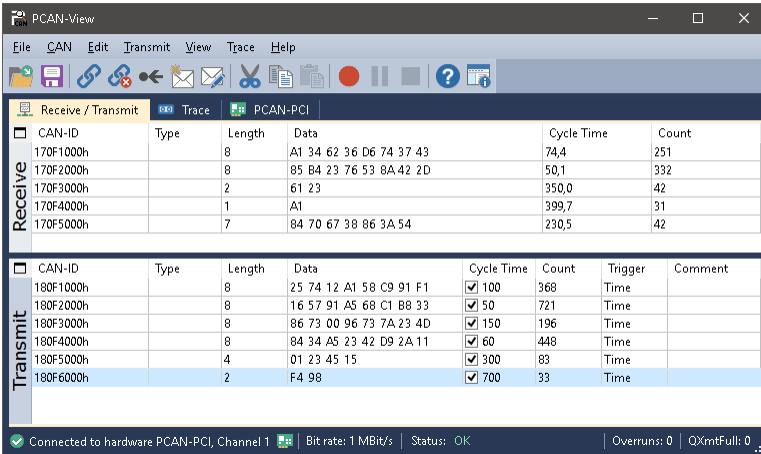

Figure 7: Receive/Transmit tab

The **Receive/Transmit** tab is the main element of PCAN-View. It contains two lists, one for received messages and one for the transmit messages. The CAN data format is hexadecimal by default.

▶ Do the following to transmit a CAN message with PCAN-View:

1. Select the menu command **Transmit > New Message** (alternatively or **Ins**).

The **New Transmit Message** dialog box appears.

Figure 8: Dialog box new transmit message

2. Enter the **ID**, the data **Length**, and the CAN message **Data**.

**Note:** With the program version 4 of PCAN-View, the DLC field was renamed to **Length**. Latter reflects the actual data length.

3. Enter a value into the **Cycle Time** field to choose manually or periodically message transmission. Enter a value greater than 0 to transmit periodically. Enter the value 0 to transmit only manually.
4. Confirm the entries with **OK**.

The created transmit message appears on the **Receive/Transmit** tab.

5. Trigger selected transmit messages manually with the menu command **Transmit > Send** (alternatively  bar). The manual transmission for CAN messages being transmitted periodically is carried out additionally.

**Tip:** Under the menu command **File > Save**, you can save the current transmit messages into a transmit list. Saved transmit lists are available for reuse.

## 4.1.2 Trace Tab

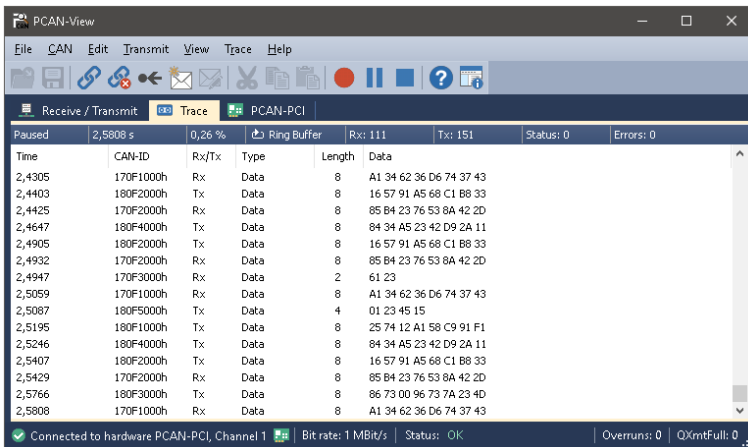

Figure 9: Trace tab

On the **Trace** tab, the data tracer (data logger) of PCAN-View is used for logging the communication on a CAN bus. During this process the messages are cached in the working memory of the PC. Afterwards they can be saved to a file.

The Tracer runs either in linear or in ring buffer mode. The linear buffer mode stops the Tracer as soon as the buffer is full. The ring buffer mode overwrites the oldest messages by new ones as soon as the buffer is full.

### 4.1.3 PCAN-PCI Tab

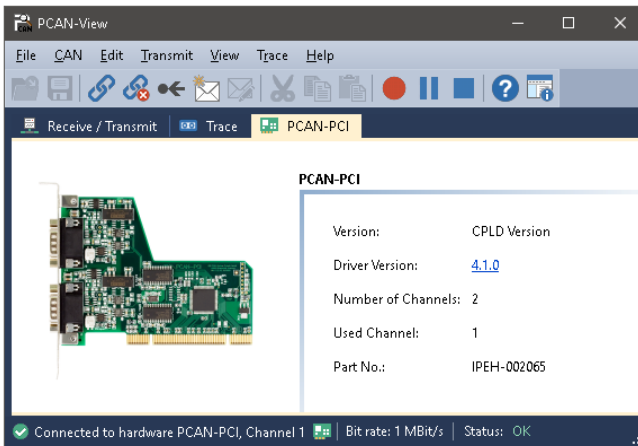

Figure 10: PCAN-PCI tab

The **PCAN-PCI** tab contains some detailed information about the hardware and driver.

### 4.1.4 Status Bar

Figure 11: Display of the status Bar

The status bar shows information about the current CAN connection, about error counters (Overruns, QXmtFull) and shows error messages.

You can find further information about the use of PCAN-View in the help which you can invoke in the program via the **Help** menu or with the **F1** key.

## 4.2 Linking Own Programs with PCAN-Basic

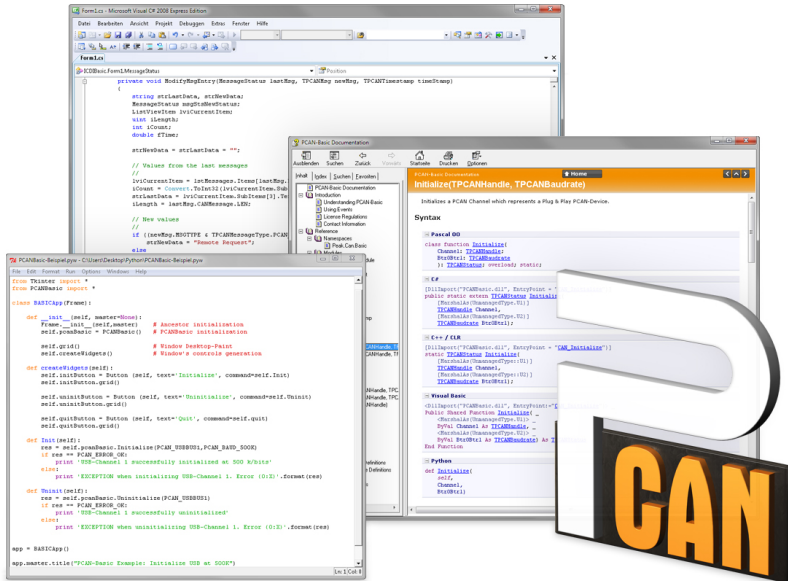

Figure 12: PCAN-Basic

On the provided DVD, you can find files of the PCAN-Basic programming interface in the directory branch `Develop`. This API provides basic functions for linking own programs to CAN and CAN FD interfaces by PEAK-System and can be used for the following operating systems:

- Windows 10, 8.1, 7 (32/64-bit)
- Windows CE 6.x (x86/ARMv4)
- Linux (32/64-bit)

The API is designed for cross-platform use. Therefore software projects can easily be ported between platforms with low efforts. For all common programming languages examples are available.

Beginning with version 4, PCAN-Basic supports the new CAN FD standard (CAN with Flexible Data Rate) which is primarily characterized by higher bandwidth for data transfer.

#### 4.2.1 Features of PCAN-Basic

- └ API for developing applications with CAN and CAN FD connection
- └ Access to the CAN channels of a PCAN-Gateway via the new PCAN-LAN device type
- └ Supports the operating systems Windows 10, 8.1, 7 (32/64-bit), Windows CE 6.x, and Linux (32/64-bit)
- └ Multiple PEAK-System applications and your own can be operated on a physical channel at the same time
- └ Use of a single DLL for all supported hardware types
- └ Use of up to 16 channels for each hardware unit (depending on the PEAK CAN interface used)
- └ Simple switching between the channels of a PEAK CAN interface
- └ Driver-internal buffer for 32,768 messages per CAN channel
- └ Precision of time stamps on received messages up to 1  $\mu$ s (depending on the PEAK CAN interface used)
- └ Supports PEAK-System's trace formats version 1.1 and 2.0 (for CAN-FD applications)
- └ Access to specific hardware parameters, such as listen-only mode
- └ Notification of the application through Windows events when a message is received

- └ Extended system for debugging operations
- └ Multilingual debugging output
- └ Output language depends on operating system
- └ Debugging information can be defined individually
- └ Thread-safe API

**Tip:** An overview of the API functions is located in the header files. You can find detailed information about the PCAN-Basic API on the provided DVD in the text and help files (file name extensions `.txt` and `.chm`).

## 4.2.2 Principle Description of the API

The PCAN-Basic API is the interface between the user application and device driver. In Windows operating systems this is a DLL (Dynamic Link Library).

The sequence of accessing the CAN interface is divided into three phases:

1. Initialization
2. Interaction
3. Completion

### Initialization

A channel must be initialized before using it. This is done by the simple call of the function `CAN_Initialize` for CAN and `CAN_InitializeFD` for CAN FD. Depending on the type of the CAN hardware, up to 16 CAN channels can be opened at the same time. After a successful initialization the CAN channel is ready. No further configuration steps are required.

## Interaction

For receiving and transmitting messages the functions `CAN_Read` and `CAN_Write` as well as `CAN_ReadFD` and `CAN_WriteFD` are available.

Additional settings can be made, e.g. setting up message filters to confine to specific CAN IDs or setting the CAN controller to listen-only mode.

When receiving CAN messages, events are used for an automatic notification of an application (client). This offers the following advantages:

- └ The application no longer needs to check for received messages periodically (no polling).
- └ The response time at reception is reduced.

## Completion

To end the communication the function `CAN_Uninitialize` is called in order to release the reserved resources for the CAN channel, among others. In addition the CAN channel is marked as "Free" and is available to other applications.

### 4.2.3 Notes about the License

Device drivers, the interface DLL, and further files needed for linking are property of the PEAK-System Technik GmbH and may be used only in connection with a hardware component purchased from PEAK-System or one of its partners. If a CAN hardware component of third-party suppliers should be compatible to one of PEAK-System, then you are not allowed to use or to pass on the driver software of PEAK-System.

If a third-party supplier develops software based on the PCAN-Basic and problems occur during the use of this software, consult the software provider.

## 5 Technical specifications

### Connectors

Computer	PCI bus (Rev. 2.2), PC98, 32-bit bus width, for 3.3 V and 5 V systems
CAN	D-Sub (m), 9 pins Pin assignment according to specification CiA® 303-1

### CAN

Specification	ISO 11898-2, High-speed CAN 2.0A (standard format) and 2.0B (extended format)
Bit rates	5 kbit/s - 1 Mbit/s
Controller	NXP SJA1000
Transceiver	NXP PCA82C251
Galvanic isolation	PCAN-PCI: none PCAN-PCI opto: up to 500 V, separate for each Channel
Supplying external devices	PCAN-PCI: D-Sub pin 1 /pin 9; 5 V, max. 100 mA PCAN-PCI opto: D-Sub pin 1 /pin 9; 5 V, max. 50 mA Not assigned at delivery
Internal termination	none

### Supply

Supply voltage	3.3 V - 5 V								
Current consumption	<table border="0"> <tr> <td>PCAN-PCI Single Channel:</td> <td>max. 150 mA</td> </tr> <tr> <td>PCAN-PCI Dual Channel:</td> <td>max. 280 mA</td> </tr> <tr> <td>PCAN-PCI Single Ch. opto:</td> <td>max. 260 mA</td> </tr> <tr> <td>PCAN-PCI Dual Ch. opto:</td> <td>max. 490 mA</td> </tr> </table>	PCAN-PCI Single Channel:	max. 150 mA	PCAN-PCI Dual Channel:	max. 280 mA	PCAN-PCI Single Ch. opto:	max. 260 mA	PCAN-PCI Dual Ch. opto:	max. 490 mA
PCAN-PCI Single Channel:	max. 150 mA								
PCAN-PCI Dual Channel:	max. 280 mA								
PCAN-PCI Single Ch. opto:	max. 260 mA

PCAN-PCI IPEH-002064/65/66/67 – EC Declaration of Conformity  
PEAK-System Technik GmbH

## Notes on the CE Symbol

The following applies to the "PCAN-PCI" product with the item number(s)  
IPEH-002064/65/66/67.

**EU Directive** This product fulfills the requirements of EU EMC Directive  
2014/30/EU (Electromagnetic Compatibility) and is designed  
for the following fields of application as for the CE marking:

### Electromagnetic Immunity

DIN EN 55024, publication date 2016-05  
Information technology equipment – Immunity characteristics – Limits and  
methods of measurement (CISPR 24:2010 + Cor.:2011 + A1:2015);  
German version EN 55024:2010 + A1:2015

### Electromagnetic Emission

DIN EN 55022, publication date 2011-12  
Information technology equipment – Radio disturbance characteristics – Limits  
and methods of measurement (CISPR 22:2008, modified);  
German version EN 55022:2010

**Declarations of Conformity** In accordance with the above mentioned EU Directive, the EU  
declarations of conformity and the associated documentation  
are held at the disposal of the competent authorities at the  
address below:

**PEAK-System Technik GmbH**  
Mr. Wilhelm  
Otto-Roehm-Strasse 69  
64293 Darmstadt  
Germany

Fax: +49 (0)6151 8173-29  
E-mail: info@peak-system.com

A handwritten signature in black ink, appearing to read "W. Roehm".

Signed this 24<sup>th</sup> day of January 2017

## Appendix B Dimension Drawing

Figure 13: Dimension drawing PCAN-PCI

The figure doesn't show the actual size of the product.

## Appendix C Quick Reference

### Software/Hardware Installation under windows

Install the driver from the supplied DVD, before you insert the plug-in card. Turn off the computer and insert the PCAN-PCI into a vacant PCI slot.

The new hardware is detected at the next Windows start and the driver is initialized. Check the operational readiness. Open the Windows Start menu. Type `peakcp1` and press **Enter**. An information window for PEAK Hardware opens. The plug-in card must be displayed in the table on the **CAN Hardware** tab.

### Getting started under windows

Run the CAN monitor PCAN-View from the Windows Start menu as a sample application for accessing the PCAN-PCI card. For initialization of the PCAN-PCI card select the desired CAN channel and the CAN bit rate.

### High-speed CAN connector (D-Sub, 9 pins)
